

foodlife GEWA-1500

DETAILS

The GEWA-1500 is a new design Washing-machine for small capacities. The machine can be used as a batch or in-line washing Machine. Together with a spinner it makes the perfect team! The rotary washing system ensures for gentle washing of the product.

“Expertise and convincing technology resulting in optimized washing” applies perfectly to the GEWA PLUS washing machines series. Vegetables, salads, herbs and fruits can be effectively and carefully washed thanks to our rotary helical washing system. The helical water flow can be fine tuned through the adjustment of separate sets of water nozzles. The water flow intensity can be manually regulated with two ball valves.

Benefits of the out-feed belt

- Extremely delicate products or big leaves will be neatly discharged from the washing machines through a hygienically conceived mesh belt conveyor.
- Air knives are strategically placed on top and below the discharge area of the conveyor belt to separate the product completely from the belt.

- The belt can be released by simply lifting up the drum motor. This opens the structure of the conveyor frame and makes cleaning quick and easy.

Product circulates through the entire water volume of the washing tank thanks to a rotating helical water flow system. This ensures a well-balanced product distribution in the wash tank.

This feature has decisive advantages:

- The compact models with a small footprint allow a reduction of water consumption.
- Movement and distribution separates the product perfectly which allows better water contact during the washing. This leads to a gentle and effective cleaning process.
- The helical water flow system takes most products quickly and gently under water. It is not necessary to use mechanical devices to allow product immersion.

The water flow conveys washed product to the product discharge section.
